- 3. I (eat) a lot ò sweets when I was a child
- 4. It (not rain) when we wnet out
- 5. Serious inflation prevented banks from (make) the profit target
- 6. If the price is high, consumers (try) to use less of it
- 7. Ann prefers (live) in the country rather than in the city
- 8. A firm's revenue is the amount it (earn) by selling goods or services in a given period
- 9. There are three key variables (dertermine) money demand - interest rate.
- 10. The money we need (hold) depends on the value of transaction.

III.

We assume that production in each industry satisfies the law of diminishing returns. Each additional worker adds less to total industry output than the previous additional workers added. For example, consider the firm industry. Beginning from the position of no worker and no output, the first worker employed increases output by 9 units per week. Adding a second worker raises the firm output only by 8 units per week. Adding a third worker increases output by only 7 units per week and the addition of yet more workers leads to even smaller increases in the firm output.

1. What happens when the firm industry takes on additional workers ?

- A. Make output.
- B. Less output
- C. No output
- D. The same output

2. How many units does the firm industry produce after employing the second worker ?

- A. 7 units per week
- B. 8 units per week
- C. 17 units per week
- D. 24 units per week

3. What does the " law of diminishing return " mean ?

- A. More employees, more output
- B. More employees, less productivities
- C. More employees, less output
- d. More employees, the same output
